

Verizon
600 Hidden Ridge
Irving, TX 75038

Short Term Public Notice of Network Change Under Rule 51.333(a)

Hosted VoIP Service

April 5, 2005

Type of Change:

Hosted Voice over Internet Protocol will allow an end user to receive line-side services for IP Phones. Layer 2 transport services will be used to connect a location to the Verizon office to receive the services. Users will receive telephony based on protocols for signaling and media exchange. The signaling protocol will be the Session Initiation Protocol (SIP) and the media exchange protocol will be the Real-time Transport Protocol (RTP).

The transport for this service will be ATM. Other Layer 2 services may be added for transport at a later date. The Layer 2 services will extend from a customer premises to the Verizon central office.

The protocols between the Verizon network and the customer premise equipment are described in the following documents:

SIP

RFC 3261 Session Initiation Protocol

To obtain IETF documents, visit the following website:
