Transparency Report

Verizon's Transparency Report for the first half of 2024

International report

Verizon's Transparency Report presents the number of demands we received from law enforcement in the United States and other countries where we did business during the first half of 2024.

We report the number of demands for customer information that we received during the first half of 2024 from law enforcement in each country outside the U.S. where we did business (and had such demands in recent years) and where reporting such information is not legally prohibited. The table below reports the number of demands we received during the first half of 2024. Following that number, in parentheses, is the number of customer selectors at issue in those demands. The table reports data from the past several years. Data from prior periods can be found by clicking the "Archive" tab at the top of the page.

A few notes about the table: A "customer selector" is an information point, such as a telephone number or IP address, that is used to identify a given customer. While our initial Transparency Reports displayed only the number of customer selectors, we now also report the number of demands we received. To provide more detail, we have divided the number of demands in the table below into two categories. A demand for "subscriber information" typically requires that we provide the name and address of the customer assigned to a given phone number or IP address. A demand for "transactional information" may seek, for instance, a log of numbers called.

We also report the number of lawful demands for intercepts (and the number of customer selectors at issue in those demands) that we received from law enforcement in Germany and the Netherlands, which are the only countries other than the U.S. where we received demands to intercept content and where we are not precluded from reporting.

While the laws in each country may differ, Verizon has trained professionals that carefully review each demand we receive. We review the demands based on each country's laws, and we only produce information in response to valid demands. We note that the vast majority of demands we receive are legally valid, but we push back on those that are not. We do not produce information in response to all demands (even if valid) when, for instance, we do not have any responsive data to produce. For example, in the first half of 2024, we had no records responsive to most of the demands we received from law enforcement in Germany, Netherlands, and the United Kingdom.

Finally, there are some limits to what we can disclose regarding law enforcement demands. In Australia and India, as explained in more detail in the notes accompanying the table, we are precluded from reporting some or all details about the legal process we receive. In addition, some countries in which Verizon does business require relevant government authorities to have direct access to data of telecommunications providers. In the Netherlands, for instance, the law requires that telecommunications providers transfer their subscriber data to a central database that can be directly accessed by Dutch law enforcement, as explained in footnote 5.

Demands for customer data (outside of the United States)

*Number of demands (Number of customer selectors in those demands)

Country	1H 2022 subscriber information	1H 2022 transactional information	2H 2022 subscriber information	2H 2022 transactional information	1H 2023 subscriber information	1H 2023 transactional information	2H 2023 subscriber information	2H 2023 transactional information	1H 2024 subscriber information	1H 2024 transactional information

United Kingdom	17(17)	9(9)	24(24)	2(2)	24(24)	0	14(14)	0	11(11)	0

Table notes:

1. In Australia, we are precluded by law from reporting the number of warrants we received from law enforcement for interceptions or stored communications. As such, for Australia, we provide only the numbers of demands for subscriber information and transactional information.
2. These numbers relate to Verizon's telematics business in China. Prior to 2020, we did not compile or report these figures.
3. In Germany, in addition to legal demands for subscriber information and transactional information, we received demands for lawful intercepts. During the first half of 2024, we received 1,454 such demands regarding 1,454 customer selectors. All of these demands were for the interception of calls initiated in Germany and made to specified international numbers.
4. In India, we are precluded by law from discussing any information about the requests that we might receive from the Government of India. We are similarly precluded from identifying the specific number of websites that we were asked to block by the Government of India.
5. In the Netherlands, the Central Information Point for Telecommunications ("CIOT" in Dutch) program run by the Ministry of Justice requires telecommunications providers to store all subscriber data (name, address, service provided, name of provider, telephone numbers, IP-addresses, and email addresses) in a central database that is accessible to Dutch law enforcement. The information we report here does not include access by Dutch law enforcement to customer data stored in the CIOT database. The Dutch government provides its own report on law enforcement access to the information stored by all providers in the CIOT database: <https://www.rijksoverheid.nl/documenten/jaarverslagen/2022/06/09/jaarverslag-ciot-2021>. We did not receive any demands for lawful intercepts in the Netherlands during the first half of 2024.

No extraterritorial demands

Verizon provides cloud computing and data storage services to business customers around the world, including many non-U.S. customers in data centers outside the U.S. In our prior Transparency Reports, we advised that we had not received any demands from the U.S. government for data stored in other countries during the periods covered in those Transparency Reports. Likewise, we did not receive any demands from the U.S. government for data stored in other countries during the first half of 2024. Nor do we anticipate that we will receive such a demand going forward.

Blocking demands and other restrictions

On occasion, we are required by government orders, regulations, or other legal requirements to block access to specified websites. We review these orders carefully to ensure they are valid government orders authorized by law. To be clear, these are requests to block access to a website, not requests to remove user content. We did not receive any requests from any government to remove user content during this reporting period.

Although we have not received blocking demands in the U.S., we have received such demands in a handful of other countries. Generally, the blocking demands are issued because the websites are contrary to laws in those countries relating to online gambling, copyright, or child sexual abuse material. The government agencies that issue these blocking demands differ from country to country, and we comply with all such demands.

While some countries have laws permitting the government to compel service providers in those countries to shut down or restrict communications services in those countries, Verizon has never received such an order. If we did receive such an order, we would determine its legal validity and try to limit any impact on our network and on our customers' freedom of expression.

The figures below relate to the number of websites that we were required to block access to during the relevant period of time. While we may be required to block access to such websites in the specified countries for an ongoing period of time, we count such demands only for the period during which they were initially made, except in Colombia. In Colombia, we are now provided with a running list of websites that we are required to block, so we now report the total number of websites designated on that list at the end of each period. We were also required to block access to websites in India, but we are precluded by law from identifying the specific number of websites. In addition to the countries listed below, we are currently blocking Russian websites in the European Union due to the current state of European Union sanctions against Russia.

Country	2H 2020	1H 2021	2H 2021	1H 2022	2H 2022	1H 2023	2H 2023	1H 2024
