

TDM Migration Solutions & Promos

Verizon Partner Solutions - your ideal option for TDM replacement with scalable and economical fiber and wireless products with compelling solutions and promotions backed by Verizon's most reliable network.

Internet Dedicated Essential (IE) is a dedicated internet service provided over Verizon's industry leading IP and Switched Ethernet local access networks combined with our Internet Dedicated Ethernet (IDE) Service.

- IE is an upgrade from a traditional broadband solution in that it provides a dedicated port on the edge router and a dedicated access to the customer premise with synchronous upload and download speeds.
- Unlike broadband, IE can be paired with other value-added services such as diversity and QoS. IE is a non-SLA service available at 100M, 300M, and 1000M speeds.

Ideal option for following use cases:

- High speed dedicated connectivity to the internet.
- Primary or secondary connectivity supporting SD-WAN solutions.

Promo available.

Verizon's Switched Ethernet products are Carrier grade, private Ethernet services designed to securely connect your customers' businesses.

- Provides secure and reliable high speed Ethernet transport from 1 Mbps up to 10 Gbps locally and nationally.

Ideal option for following use cases:

- High speed latency dependent private data transport to data centers, main and satellite offices.
- Primary connectivity supporting SD-WAN solutions.

Promo available.

VPS will work with you on your migration options. Contact your Verizon account manager for details.

Fiber to the Internet (FTTI) Provides business customers consistent, high-speed internet access.

- High-speed, fiber based data transport service to enable internet access.
- Includes the provision of shared fiber optic facilities and static or dynamic IP addressing.
- Offers symmetrical speeds of 25/25 Mbps to 2000/2000 Mbps.

Ideal option for following use cases:

- Fixed business locations that need lots of speed and data.
- Use to connect data centers, retail, education, healthcare, finance and manufacturing locations.

Promo available.

Fixed Wireless Access (FWA) is a type of 5G or 4G LTE wireless technology that enables fixed broadband access using radio frequencies instead of wired infrastructure.

FWA is the next generation of wireless connectivity, offering the potential for ultra-high speeds, low latency and massive capacity. Verizon offers 5G speeds of 100Mbps to 200Mbps. Additionally, Verizon offers where available a choice of 4G plain old telephone service (POTS) replacement solutions via BYOD certified CPE and modular enclosures that include an integrated ATA (Analog Telephone Adapter) with multiple ports for existing application continuity; a built-in router with a 12-24 hour back-up.

Option where available for following use cases:

- Primary or secondary connectivity supporting SD-WAN solutions.
- E911 Elevator
- Alarm line
- Fire Alarm

Rate plans available.

TDM to Ethernet Migration Promotion

Verizon Partner Solutions - your ideal option for TDM replacement with scalable and economical fiber and wireless products with compelling promotions backed by Verizon's most reliable network.

Discounted Rates for Migration to Ethernet.

Verizon Partner Solutions (VPS) is excited to offer special rates to facilitate migration from eligible TDM services to Transparent LAN Service (TLS) or Switched E-Line where facilities are available.

Eligible TDM Services.

- Special Access DS1s
- UNE DS1 EELs
- Contract may be required
- Additional terms apply

Illustrative Special MRC* for 10M Ethernet.

- TLS Basic CoS (at select Zone 1/2 Locations):
3 or 5 year term period at \$150 MRC
- TLS Basic CoS (at additional qualified Locations):
3 or 5 year term period at \$225 MRC
- Switched E-line (Type 1):
3 or 5 year term period at \$150 MRC
- Switched E-line (Type 2):
3 year term period at \$225 MRC
5 year term period at \$215 MRC

Eligible Accounts.

- Please contact your account manager to confirm eligibility.

Verizon Ethernet Benefits.

- Switched E-Line and TLS offer high speed data service providing Ethernet transport over a shared fiber optic network.
- Benefits:
 - Secure, reliable fiber connectivity
 - Packaged with protection options and SLAs.
 - Higher speeds for your customers' growing bandwidth needs.
 - Streamlined ordering and provisioning.

Fiber to the Internet (FTTI) TDM Migration Promotion

Verizon Partner Solutions - your ideal option for TDM replacement with scalable and economical fiber and wireless products with compelling promotions backed by Verizon's most reliable network.

NEW TDM Promotion for FTTI Service

Fast, reliable internet service fuels today's businesses. It's time to replace TDM services with FTTI!

FTTI is a high-speed, fiber-based data transport service to enable Internet access:

- Includes the provision of shared fiber optic facilities
- Allows for static or dynamic IP addressing

FTTI TDM promotion waives the non-recurring charge for qualifying new FTTI orders*:

- **With 2 year term**
- **For all bandwidths**
- **For static or dynamic IP addressing**
- **To business end users only**

Promotion period: March 23, 2023 through November 30, 2024

100% Fiber Optic Network in the Northeast - Fiber to the Internet (FTTI)

Built on Verizon's FiOS fiber optic network in Verizon's local service footprint in eight states in New England and the Mid Atlantic:

- FTTI delivers 100% fiber optic Internet connectivity right to the business premise.
- FTTI offers very quick installation. Most FTTI installs can be done in 3 - 5 business days.
- Offers symmetrical speeds of 25/25 Mbps to 2000/2000 Mbps.

High speed and reliable

- Give business customers consistent, high-speed internet access.
- Use to connect data centers, retail, education, healthcare, finance, and manufacturing locations.

Learn more:

To find out more about FTTI contact your Verizon Partner Solutions Account Manager.

Connect your business to the future.

Don't forget the POTS lines when modernizing your IT infrastructure.

It's time to look beyond Plain Old Telephone Service.

Digital Transformation isn't complete if you're still running vital services on Plain Old Telephone Service (POTS) lines.

These include life and safety systems, like elevator emergency phones, security and fire alarms, and blue-light call boxes, as well as legacy fax machines, PBX systems, meter readers and some credit card processors.

Critical business applications deserve modern connectivity, and a recent FCC ruling means some providers will soon phase out support for some types of POTS lines.

Verizon makes it easy to transition from analog POTS lines to a reliable, flexible wireless and future-ready digital alternative **where available** – without the business interruption.

POTS replacement is quick and easy with Verizon.

Verizon offers a choice of 4G or 5G plain old telephone service (POTS) replacement solutions where available via bring your own device (BYOD) certified routers and modular enclosures that includes an integrated ATA (Analog Telephone Adapter) with multiple ports for existing application continuity and a built-in router with a 12-24 hour back-up.

Learn more:

To find out more about transitioning POTS lines to a wireless solution with Verizon **where available**, contact your Verizon Partner Solutions Account Manager.

Why Verizon for POTS replacement with a wireless solution?

- Simple set up from your choice of solutions
- Managed service options to support your enterprise
- Flexible wireless plans to scale service up and down as needed
- Reliable connectivity, virtually anywhere
- Future ready nationwide LTE, upgradable to 5G when available
- One provider nationwide
