

A technology road map helping organizations work even smarter and seize new opportunities

Let's achieve
Enterprise Intelligence.

Organizations are under pressure, facing supply chain upheavals, rising costs for materials and labor, workforce shrinkage, and increasing competition all squeezing profit margins. Legacy thinking, technologies and approaches can no longer support today's business goals.

This dynamic business environment requires powerful, agile and flexible solutions that support new functionality, reveal smarter insights even more quickly and spur operational efficiency. That state of readiness is Enterprise Intelligence, the ability to harness the power of data and technology to inform, unify and accelerate your business operations. It's what can set your organization apart in the crowded marketplace.

Verizon can help you achieve Enterprise Intelligence through a mix of advanced networks, cutting-edge technologies and solutions, and integrated partner offerings that help enable end-to-end awareness and give you the visibility and insights to help improve efficiency, even in uncertain times.

It happens by bringing together cutting-edge technologies from the Industrial Internet of Things (IIoT); our Private Wireless Network, 5G Edge mobile edge computing solutions, and Verizon's decades of network expertise. Our powerful technologies and strategies can help you support connected mobile assets on the factory floor and keep your workers connected virtually anywhere work takes them. We'll help you promote task automation, drive production and improve efficiency. In streamlining workflows, improving supply chain visibility, or reducing maintenance costs and downtime, our experience and solutions help smooth factory operations so you can reach your goals faster.

Building the port of the future

When Associated British Ports (ABP) wanted to streamline processes, enhance operational efficiency, improve visibility into operations and enable deployment of new technologies and capabilities to meet future requirements for its extremely busy Port of Southampton, it turned to Verizon. The port handles some £40 billion in exports as well as more than 1.2 million cruise passengers annually.

Faced with inconsistent public 4G wireless connectivity throughout the vast port area, ABP engaged with Verizon to deploy a Private 5G wireless solution along with eight access points that handled wireless traffic for the port's 200+ acre site. The solution supported the capture and sharing of information from drones, cameras, sensors and other connected devices in near real time, enabling predictive analysis for optimizing the loading and unloading of goods and helping automate processes for greater efficiency.

ABP has been thrilled with the expanded coverage and what it has enabled. Private 5G gives ABP the rich capabilities and massive network bandwidth needed to turn Port of Southampton into a true port of the future.

Compete smarter with a committed partner.

Game-changing results are possible for organizations across industries – manufacturing, oil and gas, distribution and logistics, and more. Each sector can powerfully benefit from a network that helps enable end-to-end awareness so it can adapt to challenges in near real time.

With Verizon, you have a committed, strategic partner with America's most reliable 5G network,¹ proven solutions, and extensive expertise in building out and connecting digital ecosystems. We will engage with you wherever you are in your technology infrastructure and digital journey to help you bring users and applications together to overcome business challenges.

- **Supercharge your IT with 5G** – Power your business intelligence, automation, experiences and productivity with Verizon 5G.
- **Design your network infrastructure for future growth** – An agile, automated, flexible and transformative network starts with an intelligent network infrastructure foundation.
- **Gain flexibility with Network as a Service (NaaS) Solutions** – Kick-start innovation and transform your business with a NaaS Solutions foundation.
- **Create the future of IoT with edge computing** – Bring near-real-time processing to IoT for faster data access and increased efficiency.
