About Verizon.

Verizon designs, builds and operates networks, information systems, and mobile technologies that help businesses, government and academic entities expand their reach, increase agility, and maintain longevity. Powered by investments in security, data centers, 4G LTE, cloud computing, and global IP networking, our portfolio of solutions effortlessly meets the demands and challenges shaping technology, government and educational operations today.

State and local government agencies and education organizations across New York State can now benefit from Verizon's cloud computing, security and advanced communications solutions. Verizon is offering these services through the Information Technology Umbrella Contract from the New York Office of General Services.

Through this contract, New York state, county and local government agencies, K-12 schools and public universities can procure Verizon services that include:

- Enterprise Cloud. A managed computing platform that combines the power and flexibility of Infrastructure-as-a-Service with the expertise, security and availability that large and small organizations alike with mission-critical computing needs require.
- Unified Communications & Collaboration as a Service (UCCaaS). Verizon's hosted and managed service delivers business-grade communications and collaboration services from the cloud, offering the flexibility of a premises-based solution with the simplicity of a hosted solution.
- Virtual Communications Express. Virtual Communications Express is designed for businesses that require a reliable phone system and service without the added capital expense or burden of installing and maintaining a traditional on-premises solution.
- Virtual Contact Center. Our Virtual Contact Center platform enables your customers to get service and support through the channel that's right for them – phone, e-mail or even live chat. It equips you to solve customer challenges more quickly, reduce wait times, and ultimately improve customer satisfaction.
- Managed Security Services. Using both cognitive and automated security monitoring and analysis methods, our managed security services uncover indicators of compromise in network traffic and security logs that can help keep your organization ahead of would-be attackers — identifying gaps, weaknesses, and areas of vulnerability across your infrastructure.

This list will be updated periodically.
