

# Neutral Host Network: A reliable, flexible, cost-effective wireless connectivity foundation

## Get secure, reliable wireless coverage tailored to your business needs.

Does poor indoor wireless coverage impact your operations and customer experience? Verizon Neutral Host Network provides customers, employees and guests with high-quality wireless network coverage within specific areas across multiple mobile carriers. It's a single, sharable wireless foundation using licensed spectrum<sup>1</sup> to power the evolving digital strategy of your organization.

## Reliable coverage and flexible connectivity

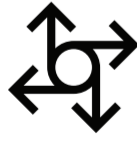

Whether you operate a fan-packed arena or busy hospital, a crowded shopping center or teeming campus, ensure seamless coverage with Neutral Host Network, and get secure and reliable connectivity tailored to your location and business needs.

## Revolutionize your business's wireless experience

Neutral Host Network is a future-ready 5G infrastructure foundation that can evolve with your digital strategy. Seamlessly incorporate other solutions, like Private 5G Network and mobile edge computing (MEC), on the same infrastructure so you can better serve your employee and customer needs.

## Benefits of Neutral Host Network:

-  **Reliability:** Get a public and private network<sup>2</sup> foundation for reliable and uninterrupted connectivity; keep your staff and customers connected and your critical applications running smoothly.
-  **Future-readiness:** This innovative solution is a future-ready 5G foundation that can seamlessly support your evolving digital strategy and help your organization remain competitive today and tomorrow.
-  **Flexibility:** Get seamless, high-performance wireless coverage and connectivity tailored to your organization. Neutral Host Network provides a flexible foundation that can adapt to and evolve with your digital needs.
-  **Cost-effectiveness:** Operate a single shared wireless network to reduce operational and management costs. Save on future private network solutions by leveraging your existing neutral host infrastructure.

1. Licensed spectrum refers to radio frequency bands reserved by the Federal Communications Commission for use by mobile network operators. No one else can broadcast on these bands, which ensures lack of significant interference and potentially better communication, reliability and performance. Customers will be required to enter into separate spectrum redistribution agreements with non-Verizon carriers.

2. A private wireless network is optional and not included with a neutral host network.
