# Let's get started.

**Mounting Bracket**

For placement and mounting instructions, visit
**support.verizon.com/router/mountingbracket**

**1 Select a mounting spot.**
Your optimal mounting spot
should be near a power outlet
and close to a window.

**2 Mount the bracket to the wall.**
Mark the positions of the screw
holes on the wall. Drill holes for
the screws using a 1/4 in. drill bit.
If required, insert anchors in the
drilled holes and recess until they
are flush with the wall. Screw in
the mounting screws in position
and slide the bracket onto
the screws.

**3 Connect the cables.**
Run the cables through
the opening on the bracket
and connect them to
the Gateway.

**4 Align the router and
lock in place.**
Place the Gateway on
the bracket and push the
device back so the feet of
the device latch into the
hooks of the bracket.

**Removing the Gateway.**
If there is a need to remove the
Gateway from the bracket, pull
the hook release under the
bracket on the right side and
slide the device forward.

## Wall Mounting Screws

Screw: PA3.5X28/NI, 2PCS

Anchor: PE5.0X27.8L, 2PCS

4.8 ~ 5.4

8.8 ~ 9.5

ø5.5 ~ 6.0
