

# Fios Extender

---

## Important!

Time for extender to complete setup on its own is approximately 10 minutes.

---

## Put your extender to work:

- Your Fios Extender expands your network connections and increases Wi-Fi coverage in your home.
- Simple to set up and easy to operate.

---

## Troubleshooting

Light color indicators:

Blinking fast yellow – extender is too close to router

Blinking slowly yellow – extender is too far from router

# Setup instructions

## Wired

- A. Connect the Fios Router to a coax outlet. (If the coax outlet is already in use, use the coax splitter included in the box.)
- B. Connect the Fios Extender to a coax outlet– ideally in an area with spotty Wi-Fi coverage.
- C. Connect the power cords from the router & extender to an electrical outlet.
- D. After 10 minutes, the light on the extender should turn solid white, indicating the connection is complete.

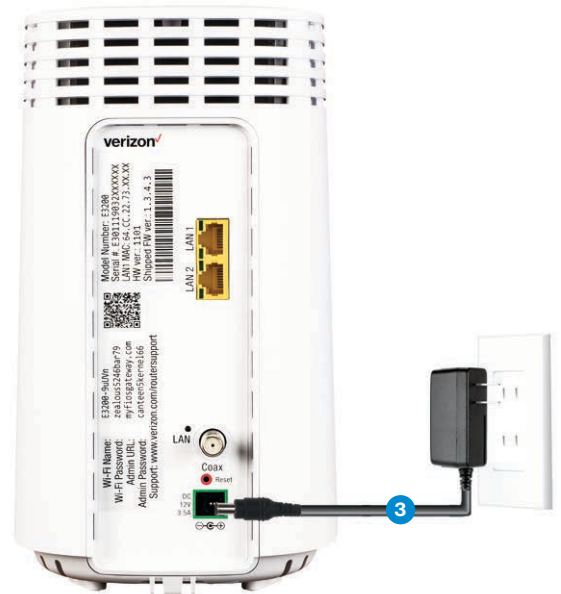

Note: If home is wired for Ethernet, follow same steps as above using an Ethernet cable instead of a coax cable.

## Wi-Fi

1. Place the Fios Extender directly next to the Fios Router.
2. Take the Ethernet cable from the packaging and connect one end to the yellow port on the router and the other end to the yellow port on the extender.
3. Connect the power cord of the extender to an electrical outlet.
4. After 10 minutes, the light on the extender should turn solid white, indicating the connection is complete.
5. Unplug and move the extender to an area between the router and an area with spotty Wi-Fi coverage. Once the extender is plugged in, the light should turn solid white again within a few minutes.

You're all set! Your devices will automatically connect to your Wi-Fi network, there is nothing more to do.
